

## ComVida Application Suite 5.1.10.1

What's New

January 2020

This small update to CVC51, 5.1.10.1, includes a few updates to the Scheduling, Payroll and Communications areas, along with an all new HR User Guide.

### Scheduling

#### Shifts to be Filled

Skill Sets with a future expiry date will now be included in the Qualified employees check in the Available Employees list. (#3244)

The page will now load the employee assignments more quickly and a new refresh button () will reload the available employees list, especially handy after sending Vacant Shift Notifications. To save unneeded page refreshes, returning to the page from a closed tool will now prompt for confirmation before performing a full refresh. (#3249)

#### Assignment Editor

The Assignment Editor will now stay on the selected date after saving changes. (#3208)

### Payroll

#### Transaction Register

The Transaction Register has been modified to use paging when there are more than 250 transactions in the grid, resulting in a much faster load time. (#3208)

### Communications

#### Send Message Results

The Results grid that displays after sending a message will display successful results first, followed by any errors that were encountered, with warnings displayed at the end. The results can also now be sorted and filtered to review the data as needed. (#3208)

#### **\*\*New\*\*** End Time Keyword

Scheduling Notification Types can now be configured to automatically include the shift's end time. To insert the end time, use the @EndTime@ keyword. (#3250)

### Human Resources

#### User Guide

The User Guide for the Human Resources application is now available under the HR Support menu.
